 TI - Timer microwave drying and heat setting method and equipoment  
 AB - The present invention adopts microwave heating method to heat and dry wood, and applies pressure to wood under the condition of hot state, through the processes of shaping and straightening, then coals the surface layer fibre of wood to make it harden and standardize wood. Its equipment includes microwave heating device, pressure device and cooling device which are respectively ued for implementing the processes of heating-drying wood, pressurizing-straightening and surface cooling to standardize wood. Said invention possesses the advantages of raising wood utilization rate, reducing cost, saving energy source and effectively utilizing energy source, can raise to 75-80%, at the same time it is harmless to human body and equipment, has no environmental pollution, and its by-products of lipid and colloidal matter also can be processed and used.
